

# Profile Report for : Bob Person

Eval # : 1 Age : 32 Gender : M Handedness : R Ethnicity : Caucasian/Anglo

Date of Birth: 1/1/1980  
Age Years: 32 Months: 8  
Evaluator: Professional

Date of Evaluation: 9/19/2012

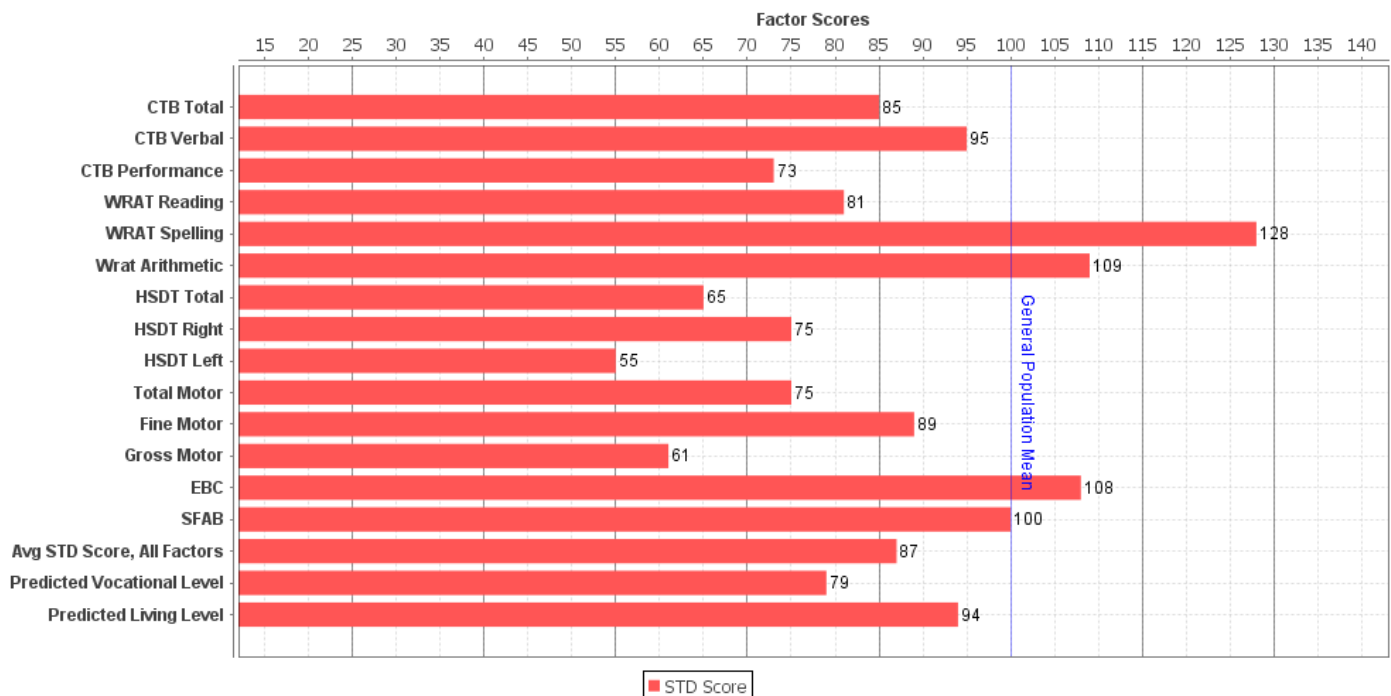

## Individual Evaluation Profile for the Visually-Impaired / Blind

Vocational Level:

Vocational Readiness/Transitional Training (Work Level 5)

Living Level:

Independent Community Living (Living Level 5)

Bob's predicted level of vocational functioning is within the Vocational Readiness/Transitional range. This range includes individuals who may require a variety of vocational readiness, work adjustment or specific skill training prior to entry level employment in the community. Often occupational exploration activities or an investigation of transferable skills will be necessary prior to considering further training or placement. Supported employment techniques of placement may also be helpful.

Bob's predicted level of residential functioning is within the Independent community Living range. Autonomous living in the community with only occasional (normal) need for assistance from others would appear possible for him.

# Profile Report for : Bob Person

Eval # : 1 Age : 32 Gender : M Handedness : R Ethnicity : Caucasian/Anglo

## Summary of Bob's Factor/Trait Analysis

Bob's AVERAGE FACTOR STANDARD SCORE for all factors measured is 79 which is in the borderline range for individuals with visual impairment or blindness.

## Programming Priorities

The present analysis indicates that program planning for Bob should include the following factors listed in order of remediation/accommodation priority:

Priority	STD Score	Factor
1st	65	Sensory
2nd	75	Motor
3rd	85	Verbal Spatial Cognitive
4th	100	Integration-Coping
5th	108	Emotional

## Factor Strengths

Strengths relative to Bob's overall average level of functioning which may be considered in goal setting, general programming or placement were observed in the following areas (strengths are defined as those factors with STD Scores 10 points or more above Bob's average factor standard score of 79):

STD Score	Factor	Description
108	Emotional	Bob's general reactions or responses to environmental stress, disability and/or interaction with others are in the average range.
100	Integration-Coping	Bob's general adaptive behaviors required for independent functioning are in the average range.

## Strengths within Specific Factors

Strengths within specific factors relative to Bob's overall score on that factor which may be considered in individual programming or placement were observed in the following areas (strengths are defined as sub-factors with STD Scores 10 points or more above the overall factor score to which they relate):

## Profile Report for : Bob Person

Eval # : 1 Age : 32 Gender : M Handedness : R Ethnicity : Caucasian/Anglo

STD Score	Sub-factor	Description
Verbal Spatial Cognitive (Factor Score = 85)		
95	CTB Verbal	Bob's verbal intellectual functioning is in the average range
103	CTB Verbal Memory	Bob's memory for verbal-language information is in the average range.
97	CTB Language	Bob's ability to understand and express spoken language is in the average range.
128	WRAT Spelling	Bob's spelling skills are in the superior range.
109	WRAT Arithmetic	Bob's arithmetic skills are in the average range.
Sensory (Factor Score = 65)		
93	Texture	Bob's ability to discriminate and immediately recall textures is in the average range.
Motor (Factor Score = 75)		
89	MAND Fine	Bob's velocity (speed and direction) and coordination of movement using primarily the fingers, hands, wrists, arms and kinesthetic feedback from those muscle groups of the upper body are in the average range.
86	MAND BD	Bimanual Dexterity – Bob's hand and finger speed and coordination using both sides of the body in unison are in the average range.

## Profile Report for : Bob Person

Eval # : 1 Age : 32 Gender : M Handedness : R Ethnicity : Caucasian/Anglo

### Factor Limitations

Weaknesses relative to Bob's average level of functioning which may affect goal setting, general programming, remediation, accommodation and/or placement were observed in the following areas (weaknesses are defined as those factors with STD Scores 10 points or more below the individual's average factor standard score):

STD Score	Factor	Description
65	Sensory	Bob's ability to receive and integrate information via the touch senses (memory for shapes, sizes, textures and spatial configurations) is in the mild deficit range.

# Profile Report for : Bob Person

Eval # : 1 Age : 32 Gender : M Handedness : R Ethnicity : Caucasian/Anglo

## Limitations within Specific Factors

Weaknesses within specific factors relative to Bob's overall score on that factor which may be considered in individual programming or placement were observed in the following areas (weaknesses are defined as sub-factors with STD Scores 10 points or more below the overall factor score to which they relate):

STD Score	Sub-factor	Description
Verbal Spatial Cognitive (Factor Score = 85)		
73	CTB Performance	Bob's performance oriented intellectual functioning is in the borderline range.
64	CTB Conceptual	Bob's ability to solve abstract spatial and conceptual problems is in the mild deficit range.
73	CTB Learning	Bob's ability to learn concepts and symbols using feedback and practice is in the borderline range.
67	CTB Spatial	Bob's ability to analyze and understand the relationship of objects to each other in space is in the mild deficit range.

### Motor (Factor Score = 75)

61	MAND Gross	Bob's coordination, balance and strength using primarily the arms, shoulders, back, abdomen and/or legs are in the mild deficit range.
